C

A	B	C	D	E	F	G	H	I	J
7	8	2	3	13	10	6	12	5	14

D

1	2	3	4	5	6	7	8	9	10
C	A	D	A	A	A	C	D	B	C

E

My idea is to make city facilities freer of barriers. For example, we should increase the number of slopes and elevators in city buildings, museums and libraries.

The first reason is that this plan would be a great help to elderly people. These days the number of elderly people is increasing, and some of them have difficulty living a normal life in the city, as when walking on the steps. Being friendly to senior citizens is an essential part of living in harmony in our hometown.

The second reason is that this plan would increase the tax income. Even if the number of disabled people is small itself, we should not overlook the large number of their family members. So this plan would attract more people than the mere number of disabled people. This would also lead to the tax increase. Therefore, this plan would pay in the long run. (150 words)

F

There are two important reasons why people go to university. One reason is that it is necessary to have specialized knowledge and skills to work for companies after graduation. For example, let's say you develop new robots in a company which suit the needs of customers in a store. In order to make products that appeal to a large number of people, you need to understand psychological aspects of consumers as well as the basic knowledge of mathematics and statistics. That is what you can acquire in university education.

In addition to specialized knowledge, people can learn how to think in a big picture in general education. University is a place where students can enhance their critical thinking skills as well as their discipline. These days, university provides their undergraduates with more opportunities to research, analyze and solve issues in a reasonable way. Take philosophy classes, for example. Even in the business world, you have to think critically and look at things from multiple perspectives as in philosophy classes. General education contributes to more flexible ways of thinking and encourages you to think in broader perspectives.

In short, these things can be obtained through university education, which is valuable for their future career. (203 words)
